This book is a collection of writings, some previously available in books published by Ian Stevenson, and some that were harder to find, having first appeared in papers, essays, lectures, and periodicals like Harper's, the Journal of the American Society for Psychical Research, the American Journal of Psychiatry, Journal of Parapsychology, etc. Since even some of Stevenson's own books can be difficult to find and costly, this book is a valuable resource, bringing together some of the best of all of these resources into a single volume. It deals with his most famous work in reincarnation, but also addresses many other topics, such as the nature of the mind, psychotropic drugs, telepathy, the placebo effect, and much more.
